Mark Vance
Google Forms

Reflection:
I use Google Forms for different many different reasons in my classroom. One of the main ways I use them is to collect data. Google forms are quick to develop and provide very valuable feedback from my students. I use them for pre assessments so that I can track student learning.

Impact:
The biggest impact Google Forms has had is on tracking student progress. In art most of my assessments are project based and it is difficult to track student understanding. However, Google Forms allows me to develop specific assessments that the students can take with their Chromebooks. This eliminates paper and pencil and compiles the data in one spot that is easy to analyze. This way I can gain good quality assessments and still have time in class to focus on project based assessments as well.

Intent:
I know there are other ways in which I can incorporate technology in my assessments. However, the district I work for has adopted the Google platform. My use of it has improved and I am starting to see an impact in student learning. I intend to find new ways to incorporate Google and other technologies into my art curriculum so that I can reach the 21st century learner.
